

AirLoc Application News...

AirLoc Bolt-on Wedgmounds® helps Oak Press Solutions control high impact press!

Oak Press Solutions, headquartered in Sturgis, Michigan, has manufactured reliable, precision, stamping presses since 1965 for worldwide distribution. Recently, Kent Lancaster, Oak technical sales and marketing manager had a leveling mount application for a 200 ton, high speed perforating line press. The application generated high impact snap through forces at 240 strokes / min. and required isolation as well as precision leveling.

AirLoc recommended a 450-VRCAD Wedgmount with two layers of 725 high damp pad material to dissipate the impacts to the floor and reduce the reflected forces back into the machine. The VRCAD design is unique with a removable top plate to accommodate an attachment bolt to the press foot at off center locations, making the alignment of mount and press foot uniform, as shown in the picture below. Kent reports that the AirLoc 450-VRCAD Wedgmount worked as predicted and their customer is happy with the performance.
